Instructions

Verify that the lesson-built relationship layer is complete and functional, then collect focused evidence for the association design, logged-in user view, cross-user and unassociated views, assignment workflow, and public profile requirements. Most coding should already be complete from the lessons; this worksheet focuses on confirming the full relationship flow, fixing remaining issues, and explaining your decisions.

Assignment Setup

Required branch: `Milestone3`

Required starting branch: `qa`

Required project folder: `public_html/project/`

Required deployed evidence target: working `qa` site before production promotion

Recommended order:

- Read the whole worksheet.

- Review the modern project proposal and Milestone 3 assignment requirements.

- Check out `qa`, pull the latest version, and create the milestone branch.

- Complete and test the relationship-table and association lessons.

- Merge the milestone branch into `qa`, test deployed behavior, then collect worksheet evidence.

Git Workflow Checklist

- Check out `qa`.

- Pull the latest `qa` branch with `git pull origin qa`.

- Create the milestone branch with `git checkout -b Milestone3`.

- Commit focused relationship and interface work in small pieces.

- Push `Milestone3`.

- Open a pull request from `Milestone3` into `qa` and keep it open while you work.

- After all Milestone 3 requirements pass locally, merge the pull request into `qa`.

- Gather evidence from the deployed `qa` site and fill out the worksheet.

Open a pull request from `Milestone3` into `qa` and keep it open while you work.
After all Milestone 3 requirements pass locally, merge the pull request into `qa`.
Gather evidence from the deployed `qa` site and fill out the worksheet.
Export the worksheet PDF from the Learn Courses Platform.
Save the PDF in the repository under `docs/milestone03/`.
Add, commit, and push the PDF to the `Milestone3` branch.

```
git add .  
git commit -m "Add milestone 3 worksheet PDF"  
git push origin Milestone3
```

Upload the same PDF to Canvas.

Create and merge a pull request from `qa` into `prod` when production evidence is required.

Switch back to `qa`.

Pull the latest `qa` branch.

Shared Requirements

Apply these requirements to every Milestone 3 feature:

Add a comment with your UCID.

Add the date to the comment.

Briefly summarize the code block or feature area in the comment.

Load shared project setup through `lib/app.php`.

Follow the database-helper patterns from the lessons.

Follow the validation patterns from the lessons.

Follow the flash-message patterns from the lessons.

Follow the session patterns from the lessons.

Follow the role-check patterns from the lessons.

Use a relationship table when many users can connect to many project records.

Include `id` in the relationship table.

Include the user foreign key in the relationship table.

Include the project-record foreign key in the relationship table.

Include `created` in the relationship table.

Include `modified` in the relationship table.

Document whether repeated user/project-record pairs are valid for the project's relationship model.

Prevent unintended repeated associations with server-side validation.

A database uniqueness constraint is recommended when repeated pairs are not valid.

When repeated pairs are valid, store values that distinguish the purpose of each relationship row.

Remove or deactivate relationships without accidentally deleting the related user or project record.

Use prepared statements or shared database helpers for every relationship query.

Enforce the project's selected role or ownership rule on the server for association creation.

Enforce the project's selected role or ownership rule on the server for remove-one actions.

Enforce the project's selected role or ownership rule on the server for remove-all actions.

Enforce role rules on the server for protected lists.

Enforce role rules on the server for assignment actions.

Document whether the all-associated view is public or role-protected.

Enforce the all-associated visibility decision on the server.

Document whether the unassociated view is public or role-protected.

Enforce the unassociated visibility decision on the server.

Validate list controls on the server.

Keep limits from 1 through 100.

Default invalid limits to 10.

Keep valid filters sticky.

Keep valid sorting choices sticky.

Provide at least one entity-specific filter on each required list.

- Keep valid filters sticky.
- Keep valid sorting choices sticky.
- Provide at least one entity-specific filter on each required list.
- Provide at least one selectable sort option in addition to the default sort.
- Show a clear no-results message instead of an empty or broken result layout.
- Show the total number of records matching the active filters where the project proposal requires it.
- Show the number of records displayed on the current page where the project proposal requires it.
- Summarize each entity with its title or identifier and at least one additional project-specific field used in Milestone 2.
- Summarize each relationship with its required `id`, `created`, and `modified` columns.
- A relationship summary may also include status or another project-specific column.
- Show usernames on public pages without exposing private account values:
 - Email
 - Roles
 - Session data
 - Other private account values
- Use POST for state-changing association actions.
- Use user-friendly flash messages.
- Log technical errors with `error_log()`.
- Apply project styling to every page.
- Apply consistent navigation to every page.
- Test through supported deployed `qa` URLs before collecting browser evidence.
- Use your own relationship concept.
- Use your own project data.
- Use your own database behavior.
- Use your own code.
- Use your own branch.
- Use your own pull request.
- Use your own deployed URLs.
- Use your own explanations.

Evidence Format

Most sections use the same evidence pattern:

Images:

- Show relevant code and matching browser or database output.
- Make sure UCID/date comments are visible in code evidence.
- Make sure the deployed `qa` URL is visible in browser evidence.
- One combined screenshot is acceptable when both parts remain readable.
- Reuse evidence when one image proves requirements in more than one section.
- Use GitHub URLs for complete files and screenshots for the focused logic requested by the task.
- Do not repeat shared helper code after the task that first verifies it.

Grading:

- Each Details bullet is required for full credit in that evidence field.
- Partial credit is based on the listed requirements that are clearly demonstrated.
- When the proposal permits a project decision, state the decision and show evidence that the application follows it.

URLs:

- Provide direct GitHub file links from the milestone branch.
- A GitHub file URL must end with the file's expected extension; zero credit for that URL entry if it does not.
- Provide anticipated production URLs for deployed PHP pages.
- Capture the tested `qa` URL, change `-qa` to `-prod`, and keep the same path and filename.
- Production page URLs must include `-prod` and end in `.php`; zero credit for that URL entry if they do not.

Provide anticipated production URLs for deployed PHP pages.

Capture the tested `qa` URL, change `-qa` to `-prod`, and keep the same path and filename.

Production page URLs must include `-prod` and end in `.php`; zero credit for that URL entry if they do not.

Response:

Explain the logic and decisions in your own words.

Describe what the relevant PHP, SQL, validation, role check, or query does.

Do not restate the prompt or list the requirements.

Submission Check

Confirm the `Milestone3` branch has been pushed.

Confirm the pull request into `qa` has been pushed.

Confirm the deployed `qa` site was reviewed before collecting evidence.

Test association creation.

Test repeated-association behavior according to the documented project rule.

Test remove-one behavior.

Test remove-all behavior.

Test the logged-in user view.

Test the all-associated view.

Test the unassociated view.

Test the assignment view.

Test the public-profile view.

Test server-side ownership or role protection.

Test one friendly failure state.

Test relevant filters.

Test sorting.

Test valid limits.

Test invalid limits.

Test no-results states.

Test matching counts.

Test displayed counts.

Confirm every submitted page URL uses the production deployment.

Confirm every submitted page URL uses the same path as the tested `qa` URL.

Confirm every GitHub file URL ends with its expected file extension.

Commit the worksheet PDF under `docs/milestone03/`.

Upload the same PDF to Canvas.

Submission Progress

100%

Section #1: (2 pts.) Association Design And Behavior

100%

Goal: show what the user-to-project relationship means and how the database protects it.

Expected behavior:

The relationship table includes a user foreign key.

The relationship table includes a project-record foreign key.

Foreign-key constraints prevent orphan relationships.

The project documents whether repeated user/project-record pairs are valid.

Repeated pairs include distinguishing relationship values when they are valid.

At least one workflow permitted by the project's selected role or ownership rule creates associations.

The server handles a repeated association without an unhandled error.

Removing an association leaves the user and project record intact.

The response states what users see when an associated record is updated manually or through the API.

The server handles a repeated association without an unhandled error.

Removing an association leaves the user and project record intact.

The response states what users see when an associated record is updated manually or through the API.

the *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM).

These journals are the most widely read and cited in the field of medicine. They are also the most expensive, with subscription rates for institutions ranging from \$10,000 to \$20,000 per year.

The *Journal of the American Medical Association* (JAMA) is the largest of the two, with a circulation of over 100,000 copies per year. The *New England Journal of Medicine* (NEJM) is the second largest, with a circulation of over 50,000 copies per year.

Both journals are published by the American Medical Association (AMA). The AMA is a non-profit organization that represents the interests of physicians and the public. It is the largest medical association in the United States, with over 250,000 members.

The AMA's mission is to promote the health of the public and the interests of physicians. It does this through a variety of activities, including advocacy, education, and research. The AMA also publishes the *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM).

The *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM) are both highly respected and influential journals. They are the primary sources of information for physicians and the public alike.

The *Journal of the American Medical Association* (JAMA) and the *New England Journal of Medicine* (NEJM) are both published by the American Medical Association (AMA). Section #2: (2 pts.) Logged In User Associations

100%

Goal: show that a logged-in user can browse and manage only the associations permitted by the project's selected ownership rule.

Expected behavior:

- The page loads project records associated with the current user's session ID.

- Each item shows the entity title or identifier and at least one additional project-specific entity field used in Milestone 2.

- Each item shows the relationship `id`, `created`, and `modified` values.

- Each item links to the project-record detail page.

- A user permitted by the project's selected ownership rule can remove one association.

- A user permitted by the project's selected ownership rule can remove all of their associations.

- The page includes at least one entity-specific filter.

- The page includes at least one selectable sort option in addition to the default sort.

- The page accepts limits from 1 through 100 and defaults invalid values to 10.

- The page shows an accurate matching count.

- The page shows an accurate displayed count.

- The page shows a clear no-results message when no records match.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One way to meet this demand is to increase the amount of food that is produced. This can be done by using more land for agriculture.

Another way to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques.

Both of these methods have their own problems. Increasing the amount of land used for agriculture can lead to deforestation and the loss of biodiversity.

Increasing the efficiency of food production can lead to the use of more pesticides and fertilizers, which can be harmful to the environment.

One solution is to use a combination of these methods. This would involve using better farming techniques and increasing the amount of land used for agriculture.

Another solution is to use more sustainable farming techniques. This would involve using less pesticides and fertilizers and using more natural resources.

There are many other ways to meet the world's growing demand for food and other resources. The key is to find a way that is sustainable and that does not harm the environment.

One way to do this is to use more sustainable farming techniques. This would involve using less pesticides and fertilizers and using more natural resources.

Another way to do this is to use more sustainable fishing techniques. This would involve using less fishing gear and using more sustainable fish species.

There are many other ways to do this. The key is to find a way that is sustainable and that does not harm the environment.

One way to do this is to use more sustainable farming techniques. This would involve using less pesticides and fertilizers and using more natural resources.

Another way to do this is to use more sustainable fishing techniques. This would involve using less fishing gear and using more sustainable fish species.

There are many other ways to do this. The key is to find a way that is sustainable and that does not harm the environment.

Section #3: (1 pt.) All Associated Records

100%

Goal: show relationship rows across multiple users with the project's selected visibility rule.

Expected behavior:

- Each row shows the associated username.

- Each row shows the entity title or identifier and at least one additional project-specific entity field used in Milestone 2.

- Each row shows the relationship `id`, `created`, and `modified` values.

- Each username links by user ID to a safe public profile.

- Each project record links to its detail page.

Each row shows the relationship `id`, `created`, and `modified` values.

Each username links by user ID to a safe public profile.

Each project record links to its detail page.

A role permitted by the project's selected removal rule can remove an individual relationship.

A partial username filter is available.

At least one entity-specific filter is available.

At least one selectable sort option is available in addition to the default sort.

The view accepts limits from 1 through 100 and defaults invalid values to 10.

The view shows an accurate matching count.

The view shows an accurate displayed count.

The view shows a clear no-results message when no records match.

The project documents whether this view is public or role-protected.

The server enforces the documented visibility decision.

the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has become a major employer in the UK, and this has implications for the way in which the public sector is managed and the way in which it is funded.

The public sector is a complex and diverse entity, and it is difficult to define it precisely. However, it can be described as the part of the economy that is owned and controlled by the state. It includes a wide range of activities, from the provision of social services to the operation of public utilities. The public sector is a major source of employment in the UK, and it plays a significant role in the economy.

The public sector is a complex and diverse entity, and it is difficult to define it precisely. However, it can be described as the part of the economy that is owned and controlled by the state. It includes a wide range of activities, from the provision of social services to the operation of public utilities. The public sector is a major source of employment in the UK, and it plays a significant role in the economy.

Section #4: (1 pt.) Unassociated Records

100%

Goal: show project records that currently have no user relationship.

Expected behavior:

- The view excludes every project record that has at least one user relationship.
- Each item shows the entity title or identifier and at least one additional project-specific entity field used in Milestone 2.
- Each item links to its detail page.
- At least one entity-specific filter is available.
- At least one selectable sort option is available in addition to the default sort.
- The view accepts limits from 1 through 100 and defaults invalid values to 10.
- The view shows an accurate matching count.
- The view shows an accurate displayed count.
- The view shows a clear no-results message when no records match.
- The project documents whether this view is public or role-protected.
- The server enforces the documented visibility decision.

Section #5: (2 pts.) Association Assignment

100%

Section #5: (2 pts.) Association Assignment

100%

Goal: show that an authorized role can search for users and project records before applying relationships.

Expected behavior:

- User search uses a partial username.

- Project-record search uses at least one user-friendly value:

 - Identifier

 - Name

 - Title

 - An equivalent project-specific value

- User search returns no more than 25 matches.

- Project-record search returns no more than 25 matches.

- The two result sets appear in clear groups or columns.

- Every user result has a checkbox.

- Every project-record result has a checkbox.

- Applying the form creates missing relationships for selected pairs.

- Applying the form removes existing relationships for selected pairs.

- A server-side role check protects the page.

- A server-side role check protects the state-changing request.

Section #6: (1 pt.) Public User Profile

100%

Goal: show safe public user information without exposing private account or authorization data.

Expected behavior:

- Association pages display the username.

- Username links identify the profile by user ID.

- The profile validates the requested user ID.

- The profile shows the username.

- The profile may also show associated-record summaries or other intentionally public project information.

- Email is not exposed.

- Roles are not exposed.

- Internal session details are not exposed.

- Other private account values are not exposed.

Section #7: (1 pt.) Misc

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.4 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply.

One of the ways to meet this demand is to increase the efficiency of food production. This can be done by using better farming techniques and by using more resources.

Another way to meet this demand is to reduce the amount of food that is wasted. This can be done by using food more efficiently and by reducing the amount of food that is thrown away.

There are many other ways to meet this demand, and it is important that we find ways to do so. This will help to ensure that everyone has enough to eat and that the environment is protected.

One of the most important things we can do is to make sure that we are using resources in a sustainable way. This means that we are using resources in a way that does not harm the environment and that we are able to use them for generations to come.

There are many other things we can do to help meet the world's growing demand for food and other resources. We need to work together to find solutions that will work for everyone.

One of the most important things we can do is to make sure that we are using resources in a sustainable way. This means that we are using resources in a way that does not harm the environment and that we are able to use them for generations to come.

There are many other things we can do to help meet the world's growing demand for food and other resources. We need to work together to find solutions that will work for everyone.
